PROJECTS

TourWallet (Group Project) (Client project)
Full-stack web application for tour expense management.Streamlined tour planning and financial tracking by developing a user-friendly web application enabling trip creation, salary slip generation, and more.

- Role: Salary Management Developer
- Contributions:
  - Designed and implemented salary slip generation functionality within a full-stack web application, streamlining financial tracking for tours.
  - Developed a custom salary calculation formula to ensure accurate compensation in line with project-specific requirements.

MongoDB | Express js | React Js | node Js

Medinnova (Group Project)
Hospital Management System (Java).Developed a comprehensive system to streamline hospital operations, including appointment scheduling, patient record management & inventory.

- Role: Front-end Developer (Hospital Room & Equipment Management Interface)
- Contributions:
  - Built a responsive user interface within a Java-based hospital management system, enabling the smooth management of hospital rooms and equipment.
  - Focused on user-friendliness and adaptability across different screen sizes to optimize efficiency for hospital staff.

MySQL | Java

Lumos(Group Project)
We have developed a Learning Management System to streamline content delivery and course management, offering features such as course creation, student enrollments, and quizzes.
HTML | CSS | JavaScript | PHP | MySQL

Koratuwa (Individual Project - ongoing)
Developing a visually appealing and user-friendly e-commerce website for a spice business using React.js. Implemented features such as dynamic product filtering, a secure shopping cart.
React.js | HTML | CSS
